

# NICU THRIVE

Developing  
Brain Institute

## WHO may participate?

- Preterm babies born  $\leq$  32 weeks gestational age and  $\leq$  4 weeks old
- Moms who are 18 years old or older
- Moms who plan to feed their newborn human milk (maternal or donor)

## How do I benefit from participation?

NICU THRIVE lasts five years, and there will be a variety of study-related activities over the study's duration. These activities start in the neonatal intensive care unit and continue through preschool. We anticipate this study will improve nutrition practices for the tiniest newborns, with the goal of improving their growth, weight and neurodevelopmental outcomes today and in the future.

You will receive as much as \$300 in remuneration for your time, based on the number of completed study visits. For instance, we would load \$75 on your ClinCard (debit card) for each completed outpatient visit to take detailed pictures of your baby's brain.
